BY JAFFE'S METHOD

Serum Uric Acid	H	7.0	mg/dL	2.4-6.0
TOTAL PROTEIN	L	5.3	mg/dl	6.4-8.3
A:G RATIO	L	0		1.00-2.00

Phosphorous	H	5.50	mg/dL	2.50-4.50

Interpretation:

The kidneys regulate the amount of water and salts that we have in our bodies. They do this by filtering the blood through millions of structures called nephrons. The kidneys also pass out certain waste products from the body. Urine is made up of the excess water, salts and waste products passed out by the kidneys down to the bladder. Urea is a waste product formed from the breakdown of proteins.

Interpretation:

A liver function test (LFT) is a blood test that measures the levels of several substances (enzymes and proteins) excreted by your liver. Levels that are higher or lower than normal can indicate liver problems. The liver function test (LFT) is also called a hepatic function panel (hepatic refers to the liver).
